The global Vascular Grafts market was valued at 944.36 Million USD in 2021 and will grow with a CAGR of 3.5% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Vascular graft or vascular bypass is a surgical procedure for redirecting blood flow between organs by reconnecting the blood vessels. The procedure is performed to treat a diseased artery to facilitate normal blood flow. It is performed to treat ischemia (also known as abnormal blood flow) for providing the vascular access for hemodialysis patient. Often an autograft is also preferred to provide the vascular access. Grafts are made of teflon, dacron, and allograft. Amongst all the product segments, bioabsorbable stents, retrievable inferior vena cava filters, and diagnostic catheters (intravascular ultrasound and optical coherence tomography catheters) markets are identified as the high growth segments in the interventional cardiology and peripheral vascular devices market. Better diagnosis of thrombus using IVUS and OCT catheters is expected to drive the diagnostic catheters market.
