Prime agricultural land can be scarce and expensive. With worldwide population growth, the demand for both more food and more land to grow food is ever increasing. One solution to our need for more space is vertical farming, involves growing crops in controlled Vegetable Cultivation environments, with precise light, nutrients, and temperatures. In vertical farming, growing plants are stacked in layers that may reach several stories tall. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. The price presents fluctuation according to the economy development status. Also, there is fluctuation in gross margin.
