Energy storage is the capture of energy produced at one time for use at a later time. A device that stores energy is generally called an accumulator or battery. Energy comes in multiple forms including radiation, chemical, gravitational potential, electrical potential, electricity, elevated temperature, latent heat and kinetic. Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Ship-based energy storage systems continue to rise in the global market. In the application category, the increase in the number of energy storage systems carried by commercial ships far exceeds that of other types of products.
