## Abstracts

The global Veterinary Ultrasound market was valued at 159.2 Million USD in 2021 and will grow with a CAGR of 3.29% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ultrasound is sound waves with frequencies higher than the upper audible limit of human hearing. Ultrasound is no different from `normal` (audible) sound in its physical properties, except in that humans cannot hear it. This limit varies from person to person and is approximately 20 kilohertz (20,000 hertz) in healthy, young adults. Ultrasound devices operate with frequencies from 20 kHz up to several gigahertz. By end users, the market has been segmented into veterinary clinics and veterinary hospitals. In 2017, the veterinary clinics segment accounted for the largest share of the market which can be attributed to the preference of pet owners to visit clinics owing to the presence of specialty doctors.
