Vibratory compactors are frequently used machines to compact materials such as soil in order to increase its density for construction and are utilized for in landfill tasks. Some common varieties are plate tamper which is also known as rammers, compactors, vibratory plates and vibratory pad foot compactors. The global vibratory soil compactor industry mainly concentrates in China, North America and Europe in terms of market value. The global leading player in this market is WIRTGEN, whose revenue is \$ 267.63 million in 2017, accounts for 15.94% % of total revenue market. The vibratory soil compactor is mainly used in road construction, public engineering and mining field. The application market share of Road Construction is up to about 50% in 2017 and it is forecasted that share will be maintain by 2023 with the increasing collaboration among rental fleet owners and vibratory soil compactor manufacturers. Currently, a major challenge affecting the market growth is the limitation of downstream market. As large demand of labor-efficient vehicles at home and abroad, many companies began to enter the field of labor-efficient vibratory soil compactor industry. The widely application of vibratory soil compactor promote the growth of customer segments and the rising demand for labor-efficient vehicles is bringing a radical change to the vibratory soil

compactor market. With increased collaboration among construction equipment manufacturers and rental fleet owners, the products are being designed as per the customer need.
