Vitamin A is a group of unsaturated nutritional organic compounds that includes retinol, retinal, retinoic acid, and several proVitamin A carotenoids (most notably beta-carotene). Vitamin A has multiple functions: it is important for growth and development, for the maintenance of the immune system and good vision. Vitamin A is needed by the retina of the eye in the form of retinal, which combines with protein opsin to form rhodopsin, the light-absorbing molecule necessary for both low-light (scotopic vision) and color vision. Vitamin A also functions in a very different role as retinoic acid (an irreversibly oxidized form of retinol), which is an important hormone-like growth factor for epithelial and other cells. Vitamin A chemical called retinol is the earliest discovered vitamin. Vitamin A contains two. One is Vitamin A alcohol (retinol), was the first Vitamin A morphology (found only in animal foods); The other is carotene, Vitamin A can be synthesized in the human body (provitaminA, preformed material from plant and animal foods intake); Vitamin A unit of measure is USP units (United States Pharmacopeia), IU units (International Units), RE (Retinol Equivalents). Vitamin A in Feed Additives is mainly classified into the following types: 500,000 IU/g, 1,000,000 IU/g and Others. 1,000,000 IU/g is the most widely used type which take up about 43% of

the total sales in 2019. Vitamin A in Feed Additives have wide range of applications, such as Poultry, Livestock, Aquaculture and Others. And Livestock was the most widely used area which took up about 43% of the global total in 2019. Asia-Pacific is the largest region of Vitamin A in Feed Additives in the world in the past few years, which took up about 46% the global market in 2019, while North America and Europe were about 15%, 31%.
