Vitamin A is a group of unsaturated nutritional organic compounds that includes retinol, retinal, retinoic acid, and several provitamin A carotenoids (most notably beta-carotene). Vitamin A has multiple functions: it is important for growth and development, for the maintenance of the immune system and good vision. Vitamin A is needed by the retina of the eye in the form of retinal, which combines with protein opsin to form rhodopsin, the light-absorbing molecule necessary for both low-light (scotopic vision) and color vision. Vitamin A also functions in a very different role as retinoic acid (an irreversibly oxidized form of retinol), which is an important hormone-like growth factor for epithelial and other cells. Vitamin A chemical called retinol is the earliest discovered vitamin. Vitamin A contains two. One is Vitamin A alcohol (retinol), was the first Vitamin A morphology (found only in animal foods); The other is carotene, vitamin A can be synthesized in the human body (provitaminA, preformed material from plant and animal foods intake); Vitamin A unit of measure is USP units (United States Pharmacopea), IU units (International Units), RE (Retinol Equivalents). The global average price of Vitamin A is in the decreasing trend, from 26370 USD/MT in 2011 to 24867 USD/MT in 2016. With the situation of global economy, prices will be in decreasing trend in the

following five years. USA is the largest producer of Vitamin A, with a production market share nearly 34% in 2016. China is the second largest producer of Vitamin A, enjoying production market share nearly 33% in 2016.
