A wafer is a dry, crispy, and crunchy thin type of biscuit that comes in different shapes, sizes, and packaging. Wafers are used with chocolate bars, ice cream, and cookies. Consumers are shifting toward convenience foods, such as wafer biscuits, that are affordable. The increasing urbanization, changing consumer lifestyles, and growing consumer spending power are factors that are expected to drive the growth of the global wafer biscuit market during the forecast period. According to the report, one driver in the market is innovative packaging. Innovative and attractive packaging is one of the best ways to attract customers and increase sales. It can help in preventing the degradation of food quality during transportation. It also helps in maintaining the freshness and preventing food loss because of damage. Innovative packaging extends the shelf life of products and provides information on storage. Wafers contain wheat flour, fat, sugar, and many flavoring agents, which are sensitive to moisture. They have a high fat level and are fragile in nature. Therefore, manufacturers must use suitable packaging to protect wafers from damage.
