The global Waterjet Cutting Machine market was valued at 948.67 Million USD in 2021 and will grow with a CAGR of 2.7% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Waterjet machines provide an efficient method of producing intricate components of machines with relative ease and precision. It facilitates versatile and effective machining, cutting, and shaping of metals and other materials. A waterjet machine uses a pump to eject water at an extremely high pressure (of over 6,000 bars) through a nozzle to cut metals and other materials. These machines generate a lesser amount of heat compared to other cutting technologies and can, therefore, be used even on materials that are highly sensitive to high temperatures. Waterjet machines also help ensure minimal wastage of the material being machined. The driving factors for the growth of waterjet cutting machine market include higher demand for process automation across various industry verticals. Additionally, stable growth from automobile industry is the fundamental factor that drives the growth of waterjet cutting machine market. Therefore, growing end-use applications of waterjet cutting machines and technological advancements are the major drivers boosting the growth of global market.
