Wearable adhesives are used to attach wearable medical devices to the skin. The designing of a suitable adhesive for wearable medical device applications is critical. It is important to ensure that the components such as skin adhesive, the substrate, and the device-hold adhesive work together. The absence of any of these components will not offer the benefits as expected and can bring users discomfort. According to the report, one driver in the market is increase in number of lifestyle diseases. The number of lifestyle diseases is rising because of lifestyle changes and increased consumption of unhealthy food. In addition, the number of diseases among the aging population is increasing. These factors are driving the need for devices to detect and track various illnesses. The aging population and baby boomers are more prone to lifestyle diseases such as hypertension, diabetes, and cardiovascular disease.
