The global Welding Robot market was valued at 706.58 Million USD in 2021 and will grow with a CAGR of 9.18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Welding robot is a kind of industrial robot used in welding processes, where two materials are fused together through heating, intermixing, and then cooling the materials to form a strong joint. Welding robot is automated and it can help increasing efficiencies & consistencies. Welding robot is widely used in automotive industry, equipment, machinery industry, and ship industry, etc. In the last five years, welding robot industry has got a rapid development. The production of welding robot is increasing faster every day. During this time, China has been the largest market of welding robot, superseding Japan. In another hand, the low robot density in China indicated the huge potential market of welding robot. Now, some companies like KUKA, ABB, Panasonic and Yaskawa have built plants in China to produce welding robots. They are trying to grab the market before the domestic manufacturers getting into an investment. In China, the biggest manufacturing is Siasun in Shenyang, but their production is relatively little compared with these foreign producers. So welding robots consumers in China have to import products from foreign manufacturers.
