Wind Lidar is a type of lidar which can be used to measure wind speed and to provide information about vertical distribution of the aerosol particles. It is a new atmospheric remote sensing equipment, and semiconductor wind lidar the only effective tool to achieve remote sensing for the three-dimensional atmospheric wind field. Wind Lidar product demand market there is also a certain space, the signal of market price change indicates the trend in the Wind Lidar industry, low-end product more widely used in wind power. Despite the presence of competition problems, due to the global energy industry trend is clear, wind power market is broad, investors are still optimistic about this area; the future will still have more new investment enter the field. Although sales of Wind Lidar brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Wind Lidar field.
