The global Wind Tunnel market was valued at 2217.28 Million USD in 2021 and will grow with a CAGR of 1.09% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A wind tunnel is a tool used in aerodynamic research to study the effects of air moving past solid objects. A wind tunnel consists of a tubular passage with the object under test mounted in the middle. Air is made to move past the object by a powerful fan system or other means. The test object, often called a wind tunnel model, is instrumented with suitable sensors to measure aerodynamic forces, pressure distribution, or other aerodynamic-related characteristics. By region, the Asia Pacific wind tunnel market is projected to grow at the highest rate from 2018 to 2023. Countries such as China, India, Japan, South Korea, Taiwan, and Australia are investing in indigenous development programs to manufacture various types of new and advanced aircraft for commercial and defense applications, along with the development of electric automotive vehicles. China has substantially increased its spending for the development of new and advanced systems for the aerospace & defense and automotive sectors. This, in turn, is expected to contribute toward increased demand for wind tunnels and wind tunnel testing services in the country. Moreover, countries such as Japan, India, and South Korea are also spending increasingly for the development of rail, automotive, and marine infrastructures, which require wind tunnel testing.
