The global Window Automation market was valued at 4648.74 Million USD in 2021 and will grow with a CAGR of 3.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Window automation is used predominately for the purpose of natural ventilation and smoke ventilation and opening hard to reach windows. The extraction of smoke and heat build up in any building can often be a difficult task to overcome. However, the inclusion of window automation systems can provide a simple ventilation system that meets with Building Regulations. By fitting a window with a mechanical actuator linked to a smoke and heat detecting system, the window will open and close automatically when smoke or excess heat are detected, returning the building to tenable conditions for its occupants.
