A pallet, sometimes inaccurately called a skid (a skid has no bottom deck boards), is a flat transport structure that supports goods in a stable fashion while being lifted by a forklift, pallet jack, front loader, work saver, or other jacking device, or a crane. A pallet is the structural foundation of a unit load which allows handling and storage efficiencies. Goods or shipping containers are often placed on a pallet secured with strapping, stretch wrap or shrink wrap and shipped. Since its invention in the twentieth century, its use has dramatically supplanted older forms of crating like the wooden box and the wooden barrel, as it works well with modern packaging like cardboard boxes and Intermodal containers commonly used for bulk shipping. Most pallets are wooden pallets. First, as for the global residential Wood Pallet industry, the industry concentration rate is relatively dispersed. The top 5 manufacturers have 58.69% sales revenue market share in 2016. The CHEP which has 42.07% market share in 2016, is the leader in the Wood Pallet industry. The manufacturers following CHEP are PalletOne and Kamps Pallets, which respectively has 7.17% and 2.47% market share globally. Second, as for the Wood Pallet market, it will still show slow growth, and technological trends in the market will stay stable.
