### Abstracts

The global Worm Gear market was valued at 568.1 Million USD in 2021 and will grow with a CAGR of 1.36% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Worm Gear is used to transfer movement and power of two alternating axis, it is a unit generally include a Worm Gear and a Worm. Worm Gears are normally used when a high gear ratio is desired, or again when the shafts are perpendicular to each other. One very important feature of Worm Gear meshes that is often of use is their irreversibility: when a Worm Gear is turned, the meshing spur gear will turn, but turning the spur gear will not turn the Worm Gear. The resulting mesh is `self-locking`, and is useful in achieving mechanisms.
