The global X-ray Tube market was valued at 1579.59 Million USD in 2021 and will grow with a CAGR of 5.71% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An X-ray tube is a Rotating anode X-Ray Tube that converts electrical input power into X-rays. X-ray tubes evolved from experimental Crookes tubes with which X-rays were first discovered on November 8, 1895, by the German physicist Wilhelm Conrad Röntgen. The availability of this controllable source of X-rays created the field of radiography, the imaging of partly opaque objects with penetrating radiation. In contrast to other sources of ionizing radiation, X-rays are only produced as long as the X-ray tube is energized. X-ray tubes are also used in CT scanners, airport luggage scanners, X-ray crystallography, material and structure analysis, and for industrial inspection. Major manufacturers in the industry include Varex Imaging (Varian), GE and Canon Electron (Toshiba), accounting for 23.01%, 18.84% and 9.88%, respectively. By region, the Asia-Pacific region has the highest share of income, at about 34.42 percent in 2019.
