Xenon is a chemical element with symbol Xe and atomic number 54. It is a colorless, dense, odorless noble gas found in the Earth's atmosphere in trace amounts. Although generally unreactive, xenon can undergo a few chemical reactions such as the formation of xenon hexafluoroplatinate, the first noble gas compound to be synthesized. Xenon market changed in the past few years in China, the average price of Xenon decreased in 2014 to 2015, and it goes up in the end of 2016 and will maintain this trend. It is said that some of the price from leading vendors rises by about 3-8% in China. Chinese market is not so stable because it is a key importer in the world.
