Xenon Test chamber used for industry and research to simulate sunlight, uses a specialized xenon arc lamp type of gas discharge lamp that produces light by passing electricity through ionized xenon gas at high pressure. It produces a bright white light that closely mimics natural sunlight. Xenon Test chamber used for industry and research to simulate sunlight, allowing engineers to evaluate the effects that light changes have on products placed within the chamber. A xenon test chamber evaluates product quality and identifies flaws and weaknesses. Xenon test chambers are utilized in all industries, from automotive to engineering and construction to medical, pharmaceutical, food processing and packaging. Manufacturers test such items as cars, cigarettes, makeup, medicine and medical instruments. There is a growing demand by customers to have extended warranties and maintenance on products. Manufacturers would be at high risk in offering these long-term warranties and service contracts without test data to back up product performance guarantees. In the last several years, global market of xenon test chambers developed steady, with an average growth rate of 4.77%. In 2017, global revenue of Corrosion Test Chamber is nearly 109.36 M USD; the actual volume is about 3400 Unit.
