April 2017 Edition, Pages: 223, Tables & Figures: 83. 2016-2022 CAGR: 9%, Driven by Bio-Chem Terror Threats CBRN Security & Safety Technologies & Market – Focus on Europe 2017-2022 Europe faces new risks of ISIS and other bio- and chemical terror attacks. These Chemical, Biological Radiological and Nuclear risks have been highlighted as follows:. At the 2017 Munich security conference, Bill Gates warned that new genetic engineering methods can produce biological agents and “Tens of millions could be killed by bio-terrorism.... Whether it occurs by a quirk of nature or at the hand of a terrorist, epidemiologists say a fast-moving airborne pathogen could kill more than 30 million people in less than a year. And they say there is a reasonable probability the world will experience such an outbreak in the next 10 to 15 years.”. US and UK intelligence agencies have said that the Islamic State has been trying to develop biological weapons in its bases in Syria and Iraq. The German Federal Criminal Police Office (BKA) has announced in January 2017 that Muslim terrorists are planning to use chemical weapons to poison drinking water supply systems in Germany. On January 2017, British Minister of State for Security Ben Wallace warned that “ISIS has no moral qualms about carrying out a mass casualty attack with chemical weapons in Britain”, and pointed to a December 2016 Europol report warning that ISIS may use chemical and biological (CB) weapons against European targets.
