Abstracts

This report was created for strategic planners, international executives, and import/export managers who are concerned with the market for hot-rolled, hot-drawn, or extruded iron and non-alloy steel with U, I, H, L and T sections of at least 80 mm high. With the globalization of this market, managers can no longer be contented with a local view. Nor can managers be contented with out-of-date statistics that appear several years after the fact. Professor Philip M. Parker, the Chair Professor of Management Science at INSEAD, has developed a methodology, based on macroeconomic and trade models, to estimate the market for hot-rolled, hot-drawn, or extruded iron and non-alloy steel with U, I, H, L and T sections of at least 80 mm high for those countries serving the world market via exports or supplying from various countries via imports. He does so for the current year based on a variety of key historical indicators and econometric models.

'Hot-rolled, hot-drawn, or extruded iron and non-alloy steel with U, I, H, L and T sections of at least 80 mm high' as a category is defined in this report following the definition given by the United Nations Statistics Division Classification Registry using the Standard International Trade Classification, Revision 3 (SITC, Rev. 3). The SITC code that defines 'hot-rolled, hot-drawn, or extruded iron and non-alloy steel with U, I, H, L and T sections of at least 80 mm high' is 67682.
