Abstracts

The growth rate of the Asia-Pacific and emerging MIS spinal device market will remain at double-digit levels throughout the forecast period. Increasingly, young surgeons see MIS spinal surgeries as the future of this field. The Asia-Pacific and Emerging MIS spinal device market also exhibits a large demand from patients with back pain, who are becoming aware of the advantages of minimally invasive techniques compared to open surgery. These factors will contribute to the expansion of the MIS market, which is not only growing due to the aging population, but also due to its ability to replace the existing demand for open spinal surgeries.
