## Abstracts

The Asia-Pacific vascular access device market reached nearly \$360 million in 2011. The vascular access device market is growing because of the increasing size and age of the patient pool. In 2011, the total population of the countries covered by this report was approximately 198 million. In 2011, South Korea had the lowest GDP per capita of the Asia-Pacific countries covered in this report. This is juxtaposed with Australia, which had the highest per capita income and some of the most expensive prices for vascular access products.
