Abstracts

In 2012, the vascular access device market in Brazil was valued at nearly \$59 million.

The vascular access device market includes implantable ports, port (Huber) needles, dialysis catheters and peripherally inserted central catheters (PICCs). Brazil has the largest private health insurance market in Latin America. The expansion of private health insurance in Brazil in recent years has resulted in a demand for better medical care and further medical equipment expenditures. Additionally, the public healthcare market continues to modernize as obsolete equipment is upgraded. The overall market for vascular access devices is expected to have high single-digit growth over the forecast period, exceeding \$100 million by 2019.

Scope: This report pertains to a forecast period of 10 years (2009 – 2019) for Brazil.

Reasons To Buy:

This report analyzes and evaluates the current state of the market including existing and potential markets, product average selling prices, and unit volumes. The report also highlights the opportunities and potential hazards involved, and presents strategies for successfully navigating the market landscape. Furthermore, it seeks to identify the trends and technologies that will affect the future of each market segment and prepares an unbiased critical assessment of such market drivers and limiters based on our “bottom up” approach, which includes primary and secondary research methods.
