Abstracts

In 2012, the sutures market represented the largest proportion of the total wound closure market.

The wound closure market includes sutures, staplers, ligating clip applicators, cyanoacrylate-based tissue adhesives and wound closure strips. Sutures are used in more than just surgical procedures; they can also be used on an outpatient basis to close lacerations. Suturing is one of the most common and longstanding practices in medicine, meaning that despite the increases in other wound closure device segments, unit share will not be cannibalized from the suture segment. The suture market is expected to continue growing.

Scope: This report pertains to a forecast period of 10 years (2009 – 2019) for China.

Reasons To Buy:

This report analyzes and evaluates the current state of the market including existing and potential markets, product average selling prices, and unit volumes. The report also highlights the opportunities and potential hazards involved, and presents strategies for successfully navigating the market landscape. Furthermore, it seeks to identify the trends and technologies that will affect the future of each market segment and prepares an unbiased critical assessment of such market drivers and limiters based on our “ground up” approach, which includes primary and secondary research methods.
