## Abstracts

### Abstract:

While there are a number of techniques used to aid fertilization, the products discussed in this chapter are those used for in-vitro fertilization (IVF) and intracytoplasmic sperm injection (ICSI). An IVF procedure removes the woman's eggs and then fertilizes them with sperm in a lab setting. IVF has been very successful in helping couples become pregnant within their first or second cycle. ICSI takes a sperm cell and injects it directly into an egg. ICSI can facilitate fertilization in conjunction with IVF.
