In 2014, the market for infusion therapy devices included infusion pumps, intravenous (IV) sets and needleless connectors (NLCs). These three broad categories are further segmented based on specific distinguishing categories. The segmentation for the needleless connector market is based on the different types of displacement available, such as positive, negative and neutral. The infusion pump market is segmented in categories based on the type of infusion performed, such large volume, syringe, electronic ambulatory and disposable infusion pumps. Finally, the intravenous set market is segmented by tubing type, such as primary IV, secondary IV and IV extension sets.
