Abstracts

The European hip and knee reconstruction markets are relatively mature and have stable procedure number growth. Both markets dwarf the shoulder reconstruction market, albeit the latter is growing the fastest. This report covers procedure numbers, average selling prices, market values, and the respective growth rates for all market segments. Hip reconstruction devices are examined in this report by total joint replacements, partial joint replacements, resurfacing implants and revision procedures. Total joint replacements are further examined by cementation method and bearing type. Knee reconstruction devices are examined by total knee replacements, unicondylar knee replacements and revision knee procedures. Total knee replacements are further examined by cementation method and bearing type. Shoulder reconstruction procedures are analyzed in detail for all of the countries covered in this report. Like the large joint markets, average selling prices and growth rates are likewise examined.
