## Abstracts

The Global Markets for Integrated Operating Room Equipment includes OR integration products that are typically packaged with some combination of OR equipment such as booms/service arms, video systems, monitors, image capture devices, surgical lighting and surgical tables. In addition, some integrated ORs can include an imaging system such as a C-arm, which allows for intra-operative imaging, or a navigation system; these are referred to as hybrid rooms. While many integrated ORs are built as part of new facilities or expansion wings, the market for these systems will be driven by upgrades of existing rooms.
