Abstracts

India has a low percentage of dentists performing implant procedures; however, there has been an increased emphasis on implant training, including changes to dental school curriculums. Indian dentists have been more price sensitive than those in other countries because they have historically had access to less-expensive dental implants and procedures. These lower costs have also led to medical tourism in the country; however, with increasing patient awareness in India, the market is expected to move from catering predominantly to medical tourism to meeting local demands.
