Abstracts

In 2012, the Indian orthopedic trauma devices market was valued at over \$75 million. The Indian orthopedic trauma devices market is split into two general categories; internal and external fixation. Internal fixation includes devices such as plates & screws, intramedullary nails, and cannulated screws. Growth in each orthopedic trauma device segment is propelled largely by the aging population, motor vehicle accidents and occasionally increasing prices due to technological advancements. There is fast growth in the overall market fuelled by the Indian government improving healthcare coverage across the country and improving regulations regarding the quality of medical devices. The increased affordability of orthopedic trauma surgeries opens up new demographics in the overall orthopedic trauma device market and will enable the market to continue growing rapidly over the forecast period.
