Abstracts

The total Indian orthopedic devices market for all small bone and joint orthopedic devices will grow at a CAGR of 13.6% over the forecast period.

The Indian small bone and joint orthopedic device market includes shoulder reconstruction implants, elbow repair devices, hand and wrist devices as well as foot and ankle devices. All of these segments experienced positive growth in 2012. An aging population continued to drive demand along with increased awareness regarding small bone and joint procedures. The overall market has been somewhat affected by reimbursements imposed by the Indian government which has influenced manufacturers to reduce their products prices. The increasing popularity of large joint implants in India has caused surgeons and patients alike to become more comfortable with the prospect of small bone and joint replacement. Small bone and joint replacement product innovation has also improved efficacy. Overall, the strong positive growth in all segments will allow the entire market to grow rapidly over the 2012–2019 forecast period.

Scope: This report pertains to a forecast period of 10 years (2012–2019) for India.
