Abstracts

The Japanese orthopedic biomaterials market is expected to approach \$1.5 billion by 2019. The hyaluronic acid viscosupplementation segment is expected to constitute the majority of the Japanese orthopedic biomaterials market.

The orthopedic biomaterials market comprises autologous bone grafts, bone graft substitutes (segmented only into synthetics) and hyaluronic acid (HA) viscosupplementation. Although the market has reached maturity in Japan, it is expected to continue to grow as a result of the large aging population. Further growth in the overall market will be fuelled by the increased value of the HA viscosupplementation segment. This is due to the continued use of premium priced three-injection cycle products in Japan that were introduced in December 2010.

Scope: This report pertains to a forecast period of 10 years (2009 – 2019) for Japan.

Others include: Biomet, JMDM, Mizuho, NGKNTK, Stryker, Zimmer and local Japanese pharmaceutical companies.

Reasons To Buy:

This report analyzes and evaluates the current state of the market including existing and potential markets, product average selling prices, and unit volumes. The report also highlights the opportunities and potential hazards involved, and presents strategies for successfully navigating the market landscape. Furthermore, it seeks to identify the trends and technologies that will affect the future of each market segment and prepares an unbiased critical assessment of such market drivers and limiters based on our “ground up” approach, which includes primary and secondary research methods.
