## Abstracts

This report covers the Latin American markets of Mexico, Brazil and Argentina. The dental implant portions of this report are divided into procedure type, shape, connection type, and application. The final abutment sections are divided by fabrication process into stock abutments, custom abutments and CAD/CAM (Computer Aided Design / Computer Aided Manufacturing) abutments.

One-stage procedures are becoming more popular, as recent technological advances have made these as reliable as two-stage procedures while requiring less time to complete. As a result, the proportion of procedures that are one-stage and immediate loading is expected to increase over the forecast period. Even so, the rise of immediate loading procedures is anticipated to be limited, as they primarily involve onepiece implants and implants used for retaining dentures.

Local Brazilian company Neodent led the Latin American market in 2012 after maintaining their revenue throughout the economic recession. Part of the company's success was a result of their offering a quality and comprehensive line of implants and related products and services at a competitive price. Neodent's prosthetic components product range is made from 100% titanium, which, when combined with the company's implants, will have a high level of compatibility and aesthetic resolution. S.I.N., a Brazilian company, was another major player in the Latin American market, offering its line of implants, prosthetic components and surgical instruments mainly in Brazil, although it also has distributors and sales offices in other Latin American countries.
