Abstracts

Abstract:

According to the Center for Disease Control and Prevention (CDC), diabetes is the seventh leading cause of death among Americans as of 2014. Moreover, diagnosed diabetes had an estimated cost of over \$245 billion in the U.S. in 2013. The prevalence of the disease led to a market size for diabetes monitoring, treatment and drug delivery of over \$16.7 billion. This market will grow in conjunction with the number of diagnosed diabetics. Some segments will grow faster than others as the demand for modern and more efficient products is increasing faster than the rate of new diabetics. Conversely, reimbursement cuts and declining prices in some segments will affect the market negatively.

Scope of Report: This report pertains to a forecast period of 10 years (2010 – 2020) for the U.S. Market.
