Abstracts

In 2012, the total market for cardiac monitoring devices was valued at over \$295 million, an increase over the previous year. The market experienced declines as a result of the economic recession of 2008 and sluggish U.S. economy. Constrained hospital budgets caused delays in the purchases of capital equipment. Reimbursement cuts for diagnostic cardiac monitoring procedures such as stress testing, Holter and event monitoring also limited market growth.

Scope: This report pertains to a forecast period of 10 years (2009 – 2019) for the U.S.
