Abstracts

In 2011, the U.S. market for laparoscopic morcellators was valued at \$59.6 million.

The U.S. market for laparoscopic morcellators can be divided into two categories: electromechanical and bipolar. While both single use and reusable devices are available in the electromechanical laparoscopic morcellator category, bipolar laparoscopic morcellators are all single use devices. In 2011, neither the price nor the technology affected the growth of the laparoscopic morcellator market in United States; instead, the dependent factor was the number of the laparoscopic procedures, and specifically the number of laparoscopic hysterectomies. The laparoscopic morcellators are most commonly used in three categories of laparoscopic surgery: laparoscopic hysterectomy, laparoscopic cholecystectomy and laparoscopic nephrectomy.

Scope: This report pertains to a forecast period of 10 years (2008 – 2018) for the U.S.
