Abstracts

The U.S. market for medical-grade image capture and recording devices was valued at over \$100 million in 2010, an increase over the previous year.

In the U.S., medical-grade image capture/video recording devices are significantly more expensive than equivalent hardware used in other applications because of the regulatory certification process that the devices are subject to. The market for these devices suffered in 2009 because of the effects of the U.S. recession; during this period, many hospitals and purchasing institutions delayed capital equipment purchases. However, stable growth of this market will be supported by the continued need for data acquisition as the U.S. healthcare system becomes increasingly data driven.

In the South Korean market for medical-grade image capture and recording devices, the number of units sold is expected to increase over the 2011–2017 forecast period.

In South Korea, medical video recorders are significantly more expensive than equivalent hardware used in other applications because of the regulatory certification process that the devices are subject to. The market for these devices suffered in 2009 because of the effects of the economic recession; during this period, many hospitals and purchasing institutions delayed capital equipment purchases. However, stable growth of this market over the forecast period will be supported by the continued need for data acquisition, as the South Korean healthcare system becomes increasingly data driven.

Scope: This report pertains to a forecast period of 10 years (2007 – 2017) for the U.S. and South Korea.
