Abstracts

Ambulatory infusion pumps were a critical addition to the infusion therapy market because they gave patients more mobility during therapy sessions. These devices were usually battery-powered and could be placed in a backpack or pocket. They are inexpensive, easy to use, and free up hospital beds for patients with more debilitating ailments. The rise of the home and alternate care segments in the medical device market not only increased the need for ambulatory infusion pumps, but also allowed device manufacturers to develop a new type of device for home and alternate care. These alternate care settings tend to be much more sensitive to device cost and overhead costs associated with the infusion therapy.

This report will focus on analyzing the current and future size and trends of the surgical post-operative pain and peripheral nerve block management disposable pump segments specifically.

Scope: This report pertains to a forecast period of 10 years (2009 – 2019) for the U.S.
