## Abstracts

With new players emerging and a flow of rapid advances in key autonomous driving technologies, the car and mobility markets are on the verge of major disruptions which will likely impact how people travel to a great extent.

Our report on autonomous cars presents the underlying technologies needed to attain the required level of autonomy.

It describes the different levels of autonomy and evaluates the potential of such vehicles.

It analyses the strategies of car manufacturers and Internet players – the latter are newcomers to the car market.

It reviews the main drivers for and barriers to autonomous car deployment on the market.

Finally, it presents sales forecasts for autonomous cars including Levels 3, 4 and 5 up to 2040.

## Contents

### 1. EXECUTIVE SUMMARY

### 2. UNDERLYING TECHNOLOGIES

#### 2.1. Difference between connected and autonomous cars

- 2.1.1. Recalling the definitions
- 2.1.2. Autonomous cars need connectivity

#### 2.2. Artificial intelligence

#### 2.3. Surrounding detection technology

- 2.3.1. Lidar
- 2.3.2. Radar
- 2.3.3. Cameras and computer vision
- 2.3.4. Other sensors
- 2.3.5. Synthesis

#### 2.4. Connectivity and communication

- 2.4.1. V2V
- 2.4.2. 5G and cellular V2X
- 2.4.3. DSRC/ITS-G5
- 2.4.4. ITS-G5 vs C-V2X
- 2.4.5. GNSS
- 2.4.6. HD Mapping

### 3. POTENTIAL AND ISSUES AROUND SELF-DRIVING CARS

#### 3.1. Levels of autonomous driving

- 3.1.1. Definitions
- 3.1.2. Issues and challenges

#### 3.2. Technologies and related challenges

#### 3.3. Level of autonomous driving

#### 3.4. Autonomous car potential

- 3.4.1. Safety
- 3.4.2. Increased convenience
- 3.4.3. Traffic and increased mobility for non-drivers

### 4. ECOSYSTEM

#### 4.1. Connectivity in the car

## 4.2. Autonomous driving ecosystem

4.2.1. Overview of autonomous car strategies

4.2.2 Autonomous driving ecosystem strategies

4.2.3. Overview of autonomous driving market maturity

4.2.4 Mapping of main players in the autonomous driving ecosystem

4.2.5. Overview of autonomous car players

4.2.6. Overview of autonomous car proposals and roadmap

## 4.3. Major car manufacturers

4.3.1 General Motors

4.3.2 Ford

4.3.3 BMW

4.3.4 Volkswagen Group

4.3.5 Tesla

4.3.6 Toyota

4.3.7 PSA

4.3.8 Renault

4.3.9 NIO

## 4.4. Internet players

4.4.1. Google

4.4.2. Apple

4.4.3. Uber

4.4.4. Baidu

## 4.5. Equipment vendors

4.5.1. Which role for equipment vendors?

4.5.2. Key acquisitions

## 5. INTERNATIONAL ADOPTION

5.1. International comparison of trust in self-driving cars

5.2. Main concerns over safety coming from developed countries

5.3. North America leads way in terms of experiments, so far

## 6. AUTONOMOUS CAR DEPLOYMENTS

6.1. Key aspects of drivers and barriers

6.2. Market estimates by 2040

6.2.1. Level 5 car will not be a reality before 2030

6.2.2. The bulk of the demand will come from Asia-Pac region

## List Of Tables

### LIST OF TABLES AND FIGURES

#### Underlying technologies

Multiple sensors work together for autonomous driving

Lidar using a spinning mirror

Lidar imaging example

Benefits and drawbacks of radar for self-driving vehicles

Radar's applications in ADAS

Differences between short-range and long-range radars

Applications of cameras in autonomous vehicles

Ultrasonic sensors in autonomous driving

VCSEL players in the automotive space

Comparison of main sensors used for self-driving cars

Main scenarios where V2V can prevent accidents

GM 2017 Cadillac CTS saloons, the first GM car to come equipped with V2V

Available operation modes in LTE-Sidelink Communications

Direct communications (with vehicles, infrastructure, people)

Communications through the network

Repartition of C-V2X application tested in trials (base= 27): Collision avoidance, the most tested use case

Worldwide C-V2X trials as of end 2018

5G scope and automotive applications

DSRC/ITS-G5 deployments where Autotal is involved

What each supporter is saying of the technology competitor

Likely regulatory environment for V2X technologies

Complementarity between GNSS (absolute positioning) and other sensors (relative positioning)

What is an HD map? A SD map with additional layers

#### Potential and issues around self-driving cars

Autonomous driving levels

Difficult situations for self-driving

Traffic-light detection

What can you see in this picture?

Autonomous driving is also a question of responsibilities

Major causes for traffic accidents

Causes of stress and anxiety in the car

Park Assist (BMW)

Reduced distance between cars thanks to highway platooning result in reduced consumption and improved traffic conditions

#### Ecosystem

Testing a self-driving Chevy Bolt electric vehicle

GM Maven car-sharing service

Autonomous Ford Fusion Hybrid vehicle

Trial of self-driving car with Domino's Pizza in August 2017

Sensor system of BMW autonomous driving

VW Sedric concept car for Level 5 autonomous driving

Sensor components enabling Audi A8 Level 3 autonomous driving

Example of OTA updates and new features brought to existing models

Level 3 self-driving features available to Tesla models with hardware 2 and more

Enhanced autopilot systems for autonomous driving

Number of (crowdsourced) miles driven by Tesla Autopilot

Toyota two-side development approach to self driving

Mobility as a Service as a way to speed up full self-driving technologies

Toyota e-Pallete concept announced at CES 2018

#### Ecosystem

PSA Level 3 capable vehicles involved in L3Pilot project

Renault Nissan Mitsubishi Alliance roadmap for autonomous driving

Comparison of SUV models (as published in NIO Annual Report)

The Waymo 'Firefly' (retired in August 2017)

Waymo lidar sensors for sale to non-competing companies

Waymo One service deployed in areas of Phoenix, Arizona

A Lexus RX450h used by Apple in its testing of self-driving vehicles

Uber-Volvo self-driving car in development

Baidu-Chery autonomous driving prototype car (based on Apollo)

Apollo roadmap

Apollo hardware platform

#### International adoption

Consumer acceptance score, by country

Percentage of consumers who think fully self-driving vehicles will not be safe (2017 vs 2018)

Number of cities with trials and initiatives around autonomous cars

#### Autonomous car deployments

World car sales, by their level of autonomy, million units

Total sales by 2040, by region and by autonomy level

## I would like to order

Product name: Autonomous Vehicles: Technology-centric cars at the core of the mobility revolution

Product link: <https://marketpublishers.com/r/A3AFBF0CA0CEN.html>

Price: US\$ 2,200.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

[info@marketpublishers.com](mailto:info@marketpublishers.com)

## Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/A3AFBF0CA0CEN.html>
