Abstracts

2025 scenarios for the UHF band & the role of hybrid networks

Terrestrial broadcasting plays a significant role in TV reception... but the UHF (Ultra High Frequency) band is highly coveted by the mobile industry.

Hybrid networks could provide an answer to spectrum scarcity in the UHF band.

This report presents the most likely scenarios for the UHF band and the role of hybrid networks between now and 2025.

Contents

1. EXECUTIVE SUMMARY

2. METHODOLOGY & DEFINITIONS

- 2.1. General methodology of IDATE's reports
- 2.2. 2025 scenarios for the UHF band

3. INTRODUCTION

4. BROADCASTING SPECTRUM STATUS

- 4.1. Cable is becoming the leading mode of TV access on the main TV set
- 4.2. Varying degrees of network digitisation
- 4.3. Terrestrial TV: slower rate of decline
- 4.4. Spectrum used by terrestrial broadcast
 - 4.4.1. Broadcast spectrum in the USA
 - 4.4.2. Broadcast spectrum in Europe
 - 4.4.3. Digital Dividend(s) reduce the amount of spectrum allocated to broadcasters
- 4.5. Satellite TV and radio spectrum
 - 4.5.1. L-Band (1-2 GHz)
 - 4.5.2. S-band (2 GHz)
 - 4.5.3. C-Band (4-8 GHz)
 - 4.5.4. Ku and Ka bands
 - 4.5.5. Satellite TV spectrum in Asia

5. MOBILE SPECTRUM STATUS AND FUTURE NEEDS

- 5.1. On-going developments
 - 5.1.1. At world level
 - 5.1.2. At European level
- 5.2. Mobile spectrum today
 - 5.2.1. Overview of spectrum used for mobile broadband
 - 5.2.2. Mobile spectrum below the UHF band
 - 5.2.3. The 700 MHz band
- 5.3. New frequency bands for mobile broadband
- 5.4. Could parts of the UHF band become new resources for mobile broadband?
 - 5.4.1. Spectrum/mobile licences valuation

5.4.2. Supplemental Downlink (SDL)

6. COULD HYBRID NETWORKS SOLVE THE SPECTRUM SCARCITY ISSUE IN THE UHF BAND?

6.1. Definition of hybrid networks

6.2. Rationale for hybrid networks

6.2.1. Limits of unicast technologies - Comparing unicast and multicast/broadcast delivery

6.2.2. Why / when use broadcast?

6.3. Terrestrial broadcast technologies

6.3.1. Digital television - DVB

6.3.2. eMBMS (evolved Multimedia Broadcast and Multicast services)

6.4. Technological evolution related to video resolution

6.5. Hybrid approaches

6.5.1. Hybrid Broadcast Broadband (HBB)

6.5.2. Tower overlay

6.5.3. H2B2VS

6.5.4. TDF B2M concept

6.6. Chipset and device for hybrid networks perspective

6.6.1. Chipsets

6.6.2. Antennas and band support

6.6.3. Power consumption issue

6.6.4. Set-top boxes and gateways

7. 2025 SCENARIOS FOR THE UHF BAND IN EUROPE

7.1. Technology roadmap

7.2. Presentation of the scenarios and main assumptions

7.3. Scenario 1 - DTT keeps 470-694 MHz in Europe ('status quo')

7.4. Scenario 2 - Broadcast networks play a more important role towards mobile devices

7.5. Scenario 3 - UHF band mainly used by hybrid networks

7.6. Scenario 4 - UHF band used by mobile networks

7.7. Conclusion

8. GLOSSARY

9. ANNEX: ASO (ANALOGUE SWITCH-OFF) AND DTT ROU (RIGHTS OF USE)

Tables

TABLES

- Table 1: First and second Digital Dividends, worldwide
- Table 2: 2025 scenarios for the UHF band (470-694 MHz)
- Table 3: First and second Digital Dividends, worldwide
- Table 4: Satellite frequency bands and related services
- Table 5: C-band allocations
- Table 6: Ku and Ka-Bands for satellite communications (Europe)
- Table 7: Main frequency bands for UMTS/HSPA/LTE deployment – FDD mode
- Table 8: Main frequency bands for UMTS/HSPA/LTE deployment – TDD mode
- Table 9: Status of the 700 MHz band worldwide
- Table 10: 3GPP 700 MHz allocations in Regions 2 and
- Table 11: APT 700 MHz plan – adoption in Asia-Pacific
- Table 12: Price (eurocents) per MHz per pop. (for 10 years)
- Table 13: DVB-T and DVB-T2 – number of deployments
- Table 14: Main characteristics of DVB-T and DVB-T2
- Table 15: Overview of MBMS support in 3GPP
- Table 16: Resolution, frame rate, encoding, bit rate and adoption for various TV formats
- Table 17: Timescales for video coding standards
- Table 18: Overview of benefits of Hybrid Broadcast Broadband TV
- Table 19: 2025 scenarios for the UHF band (470-694 MHz)
- Table 20: Criteria presented in our scenarios
- Table 21: Scenario 1 - DTT keeps 470-694 MHz in Europe ('status quo')
- Table 22: Scenario 2 - Broadcast networks play a more important role towards mobile devices
- Table 23: Scenario 3 - UHF band mainly used by hybrid networks
- Table 24: Scenario 4 - UHF band used by mobile networks

PLAYERS COVERED IN THE REPORT

Alcatel-Lucent
Anatel
Arqiva
Astra
AT&T
BBC
Broadcom
BT
China Mobile
Deutsche Telekom
DirecTV
Dish Network
EE
Ericsson
Eutelsat
FCC
HbbTV.org

Industry Canada
Inmarsat
Intelsat
Iridium
KDDi
Korea Telecom
KPN
KT
Lantiq
LightSquared
Mediatek
Netflix
Netgem
NTT DOCOMO
Ofcom
Orange
Qualcomm
Reliance
Samsung
SiriusXM
Smart Communications
Sprint (formerly Sprint Nextel)
Subtel
Taiwan Mobile
TDF
Technicolor
Telstra
TerreStar
Thomson
Thuraya
T-Mobile
TRAI
Verizon Wireless
YouTube
