REPORT SYNOPSIS

Activated carbon's outstanding capability in adsorbing a number of impurities from liquids and gases renders it to be used on an extensive basis in several applications concerning air and water purification. Additional application areas for the material include the automotive, food & beverage and medical & pharmaceutical industries, although on a limited basis. The future market for activated carbon is also likely to derive benefit from a continuous stream of openings from a number of industrial processes that employ adsorption technologies.

Anticipation of the imminent development and availability of suitable vaccines against this pandemic has given impetus to manufacturing activities across the world and this is reflected in the market for Activated Carbon. The highs of demand witnessed during 2017-2019 are likely to taper off in 2020 and pick up momentum sometime during 2022, which will again depend on the ground situation.
