### Report Synopsis

Diagnosing cancer in its initial stages may prevent the mortality rate. As per the international Cancer Agencies, the cancer incidence rate may reach 23 million by 2030 that indicates urgency of the arrival of maximum number of less invasive, more efficient and accurate diagnostic devices like Biopsy Devices in to the market. Biopsy Devices are recognized as the most essential tools not only in the diagnosis and treatment of cancer but also in detection of cancer stage.

Rising cancer incidence and prevalence rate, increasing demand for minimal invasive protocols, existence of large geriatric population, growing public awareness about the diseases and diagnostics options, emerging nascent biopsy techniques, assistance offered by the government and global health organization are some of the factors contributing to the growth of the Biopsy Devices market. Guidance Systems lead the global market for Biopsy Devices as the single largest product type, demand for this type accounts for a share of 43% in 2017 and projected to remain the largest type by 2023 as well.
