REPORT SYNOPSIS

Carbon black becoming an integral component of high-performance coatings can be attributed to its superior properties, such as resistance to high wear & tear, ability to withstand adverse weather conditions and insulation features. Another trend being witnessed is a move towards “green” carbon black, which is obtained from end-of-life discarded tires through a process called pyrolysis. All these factors augur a steady positive growth in demand for carbon black.

Automotive & Transportation sector is the principal global volume market for Carbon Black, which is estimated at 8.7 million metric tons in 2019 and is anticipated to post a 2018-2024 CAGR of 5.4% in reaching a projected 11.4 million metric tons, valued at US\$13.2 billion, by 2024. Printing & Packaging sector is anticipated to be the fastest growing market for Carbon Black in terms of both volume and value.
