### Report Synopsis

Despite all the negative press about the harmful effects of meat consumption, there has been a limited let up in demand for meat products, which further augurs well for the Meat Processing Equipment market. While the trend of adopting vegetarian or vegan diets has been quite noteworthy among western countries, the same has not necessarily caught up with other regions. Owing to this, the market for Meat Processing Equipment in regions, such as Asia-Pacific, South America and Middle East & Africa will register good growth over the analysis period.

While the market for processed meat, and simultaneously Meat Processing Equipment, will continue to maintain a steady growth, factors, such as growing preference for vegan & vegetarian diets, negative effects of highly salted processed meats, especially for specific sections of the population, and demand for healthier processing methods would limit demand.

Fresh Processed Meat is estimated the largest market for Meat Processing Equipment with a 2024 market share of 24% while Cured Meat is projected the fastest growing application market during 2024-2030. The overall market, globally, for meat processing equipment is expected to reach \$11.4 billion in 2025.
