### Report Synopsis

The range of applications for adhesives and sealants the medical sector includes the areas of dentistry & cosmetics, internal & external surgery and medical devices & equipment. Major among the latter comprise prostheses, assistive devices, diagnostic equipment, medical disposable devices and surgical instruments. Natural and synthetic/semi-synthetic are the two key categories of medical adhesives & sealants. Among these, acrylic, silicone, polyurethane, polyethylene glycol and cyanoacrylate are most widely used materials to make synthetic/semi-synthetic adhesives & sealants, with albumin, collagen and fibrin representing the resins employed for producing natural medical adhesives & sealants.

Acrylic is the most preferred resin to make Medical Adhesives & Sealants because of its good applicability in external and internal medical applications, including as adhesives in dentistry and healthcare devices. However, silicone-based Medical Adhesives & Sealants will likely post the fastest growth over the analysis period, as these possess limited cross-reactivity with other metals and offer better eco-friendliness and durability than acrylics. Silicone-based adhesives are most widely applied in medical tapes used in external applications. On the negative side, the relatively high cost of these resins can be a restraining factor in their wider utilization.
