Abstracts

China in-vitro diagnostics market is predicted to reach US\$ 28.13 Billion by 2030, from US\$ 11.96 Billion in 2023. China is the largest in-vitro diagnostics market in the Asia-Pacific region, and only second to the United States in terms of value. In-vitro diagnostics refers to the diagnosis of disease or other condition of the human body through the collection, preparation, and testing of human samples with reagents, instruments, and systems. China is facing the challenges of fighting with infectious disease including HBV, TB, HCV and HIV, as well as various chronic diseases and cancer. In-vitro diagnostics plays an important role in the detection of infectious and chronic diseases.

Due to the upsurge of the geriatric population and the high burden of chronic and infectious diseases, like diabetes, cancer, and COVID-19, the China IVD market is slated to show significant growth, as these chronic disorders can be diagnosed and monitored using in-vitro diagnostics products. Moreover, Chinese government is taking number of initiatives to improve the healthcare sector in the country. For instance, The State Council issued a guideline to implement the country's Healthy China initiative to diminish the incidence of disability among elderly people aged between 65 and 74 years by offering medical and health services. Such initiatives by the government are expected to boost market growth over the forecast period. However, a lack of proper reimbursement and stringent regulatory framework restricts the market's growth.

China In-Vitro Diagnostics Market – Recent Developments

By Segment: China In-Vitro Diagnostics Market and Forecast – Key Takeaways

Immunoassay and Clinical Chemistry are the leading segments of the China IVD market. Together they contributed around 60 percent to the total China IVD market in 2023.

Molecular Testing is the fastest growing segment of the China IVD market, driven by increasing demand for polymerase chain reaction (PCR) products in China.

POCT and SMBG segments are competing closely to grab maximum market share of the pie. POCT is transforming diagnostic practices through its convenience and efficiency.

China SMBG market is dominated by foreign IVD companies such as Roche.

Microbiology testing is witnessing growth due to technological advancements and increasing infectious disease incidences.

The growth of hematology market is attributed to factors such as the increasing incidences of blood disorders, growing adoption of automated hematology

instruments by diagnostic laboratories, the emergence of high throughput hematology analyzers, and the introduction of technologically advanced hematology instruments.
