The global auto-injectors market is expected to reach nearly US\$ 6 Billion by 2025. The auto-injector is a small device designed to deliver a specific dose of a particular drug. These are usually spring-loaded syringes that are mainly invented for comfortable and safe dispensation of the drugs. The drug is delivered by inserting the syringe needle at the desired site of injection, and on a push of a button. Auto-injectors are easy to use, and intended for self-administration by patients or any other care taker or personnel at home. Rising self-medication practices, mounting occurrence of chronic and lifestyle associated diseases, advancement in technology, government reimbursements, and increasing incidences of anaphylaxis cases and food allergies around the world is majorly responsible for the growth of the global auto-injectors market.
