Abstracts

The unprecedented demand of proton therapy for the treatment of cancer has set the stage for the market to move ahead at a rapid pace. It is anticipated that the Global proton therapy market will almost double by 2022 from its current market value. The increased demand for proton therapy has motivated many prominent cancer centers in the world to provide proton therapy treatment. The number of proton therapy centers worldwide is anticipated to increase year on year, which in turn, will result in more clinical research, better clinician understanding and greater patient awareness of its benefits-which will help drive the further growth.

Globally, the numbers of patients treated with Proton Therapy is very low whereas; the potential candidates for proton therapy are in Millions. The number of proton therapy centers is increasing globally. Still, industry experts believe that players will miss out on a majority of cancer patients who can benefit with proton therapy, overlooking a huge multi-Billion-dollar potential market. IBA dominates the proton therapy market globally. However, other players like Varian, Mitsubishi, Mevion, Hitachi etc. have also started to make their presence felt in the market.

The United States accounts for maximum share of the proton therapy market. United States is likely to maintain its dominant position throughout the forecasting period. The US retains the highest number of proton therapy centers and many are in development phase or under construction.
