## **Abstracts**

The global service robotics market is expected to reach nearly US\$ 50 Billion by 2027. Service robots are the robots designed to assist humans and perform useful tasks, excluding industrial and manufacturing automation applications. Service robots have witnessed widespread acceptance among various professional and personal applications owing to benefits such as enhanced usability, delivery of accurate and high-quality services, reliability, and reduced operational costs and human errors. Professional service robots are employed in various industries including medical, defense, agriculture, logistics, inspection and maintenance, rescue and security, construction, and professional cleaning among others, whereas personal service robots are used for domestic and entertainment and leisure purpose. The service robotics market is driven by an upsurge in its adoption owing to high labor cost, lack of skilled workforce, increasing research and development investments, growing awareness regarding the benefits of service robots, and increased demand for automation among professional and personal sectors. The high initial investment and concern for human safety restricts the growth of the market.

## **Recent Developments**
